Subject: Entry Level Software Developer

April 6, 2013

Dear Sir or Madam,

I am interested in an entry level Software Developer position with Vodori. I found the job on the joelonsoftware.com Job Board. I love to read his blog and he has many insightful article on software development and the software culture.

I am a recent graduate at Grand Valley State University with a Bachelor degree in Computer Science. Now I am looking for a position that I am passionate about. Your company is very apt to the types of technologies I am looking forward to working with in my career and the culture and mix of people would be a great opportunity for me.

At CleanLogix I have done user interface design with Ruby and QT, and also helped develop a website front-end with PHP and JQuery. I have done formal school projects with JavaScript, JQUERY and DJANGO, and my Senior Capstone Course involved a Data Mining application with Django and a python flask backend, check it out at avalanche.evavro.com. I am familiar with pandas, scipy, and numpy. I would appreciate the opportunity to discuss what positions you man have.

Best Regards,

Matthew Levandowski
